For summaries of the Fri, 15 Feb 2019 06:23:00 GMT Design of Experiments (DOE) Using the Taguchi Approach - In many applications, the statistician is most concerned with a "parameter of interest" rather than with "nuisance parameters". More generally, statisticians consider linear combinations of parameters, which are estimated via linear combinations of treatment-means in the design of experiments and in the analysis of variance; such linear combinations are called contrasts. Sun, 17 Feb 2019 14:28:00 GMT Optimal design - Wikipedia - In statistics, a full factorial experiment is an experiment whose design consists of two or more factors, each with discrete possible values or "levels", and whose experimental units take on all possible combinations of these levels across all such factors. A full factorial design may also be called a fully crossed design. Such an experiment allows the investigator to study the effect of each ... Factorial experiment - Wikipedia - Design of Experiments
